MARKET SCALE & GROUND TRUTH

The National Footprint: Sourced Facts vs Forecasts

Strict source separation: Nasscom-Zinnov FY26 benchmark figures vs JLL commercial real estate projections.

NATIONAL BASELINE

Nasscom-Zinnov FY26

Verified National Baseline

- **2,117 GCC Corporate Parents:** Operating capability centres across Indian metros.
- **3,728 Operating Units:** Distinct physical business campuses and functional centres.
- **2.36 Million Professionals:** High-skill software engineers, data scientists, and quantitative analysts.
- **~$98.4B Annual Value:** Direct economic output delivered to parent multinational headquarters.

COMMERCIAL REAL ESTATE PERSPECTIVE

JLL India 2026

Expansion Forecasts & Leasing

- **200+ New Units Projected:** Estimated by JLL over a 24-month horizon across Tier-1 and emerging hubs.
- **Leasing Density:** Bengaluru and Hyderabad account for over 55% of all new Grade A absorption deeds.
- **Unit vs Parent Discrepancy:** Real estate tracking counts individual commercial floor leases, leading to higher counts than corporate parent registrations.

SECTION 1

The Problem

Asymmetrical reporting and fragmented data force entrant companies to navigate a complex, broker-driven setup chain.

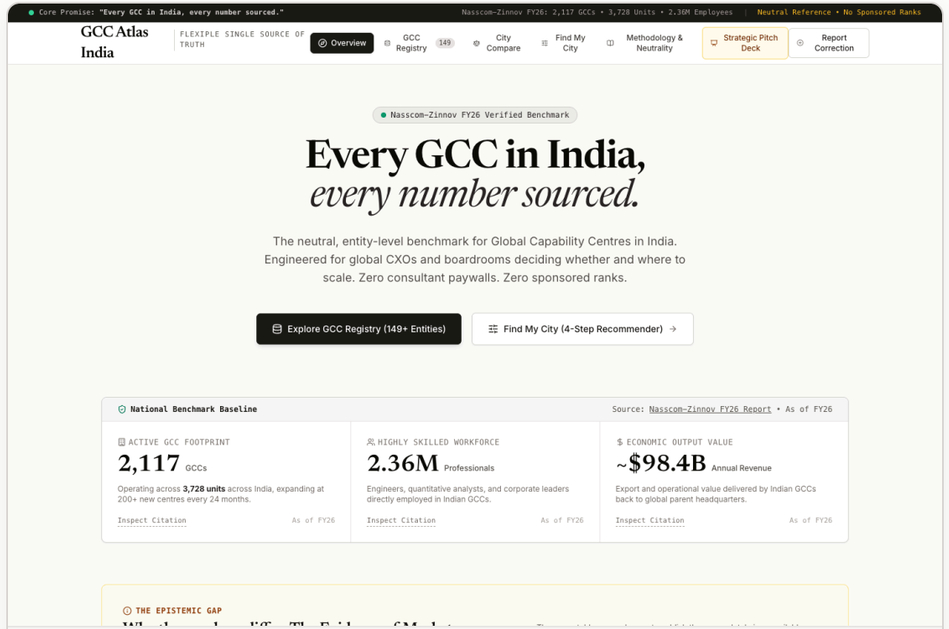

The Players in the Long Chain

Global entrants deal with a fragmented web: commercial landlords, legal advisors, tax auditors, BOT operators, recruiters, EOR platforms, and state IT promotion agencies.

The Epistemic Disparity: Reports publish conflicting counts for the exact same city without underlying entity data. In Bengaluru, *Vestian reports 487 GCCs* (standalone parent leases), *JLL reports 900+ units* (physical business branches), while *Industry Registries list ~870 entities*.

Who is Hurt by the Asymmetry?

- **Global Entrant CXO (Hypothesis for Discovery):** Lacks an uncorrupted single source of truth; spends months in feasibility cycles and risks misallocating micro-markets based on commercial broker sales pitches.
- **Legitimate Service Providers:** Quality boutique BOT advisors lose bids to aggressive brand marketing rather than verified delivery outcomes.
- **What They Do Today:** Rely almost entirely on informal referrals, word-of-mouth WhatsApp advice, and PDF consultant reports.

SECTION 2

The Opportunities

7 ecosystem vectors identified. Why the entity registry and location recommender matter most.

STRATEGIC PRIORITIZATION

Which Opportunities Matter Most & Why

1. Entity-Level Sourced Registry (Priority #1):

Why: Trust is the prerequisite. Without a verifiable list of actual companies, statutory citations, and honest confidence badges, no executive will trust a recommendation algorithm.

2. Deterministic Location Engine (Priority #2):

Why: Captures uncorrupted entrant commercial intent (sector, team size, priority). CXOs get transparent scoring; future marketplace partners get qualified demand signals.

3. Multi-Metro Cost & Policy Matrix (Priority #3):

Why: Delivers immediate board-level clarity on commercial rents, talent compensation arbitrage, and state policy gazettes in seconds.

FULL OPPORTUNITY LANDSCAPE

The 7 Ecosystem Vectors

- **A. Entity Sourced Registry:** Public verified database of MNC capability centres.
- **B. Deterministic Recommender:** Rule-based location shortlist with visible math.
- **C. City Comparator Matrix:** Side-by-side rent, salary, and policy benchmarking.
- **D. Regulatory Ingestion Pipeline (Future):** Exploring scheduled MCA Form MGT-7 crawlers to detect newly incorporated subsidiaries.
- **E. Talent Mobility Radar (Future):** Analyzing leadership departures and corridor expansion signals.
- **F. Audited Provider Directory:** Case-study verified ecosystem advisors.
- **G. Vetted RFP Marketplace:** Transparent bids for setup and BOT operators.

SECTION 3 (PART 1)

The Solution: Audited Registry & City Compare

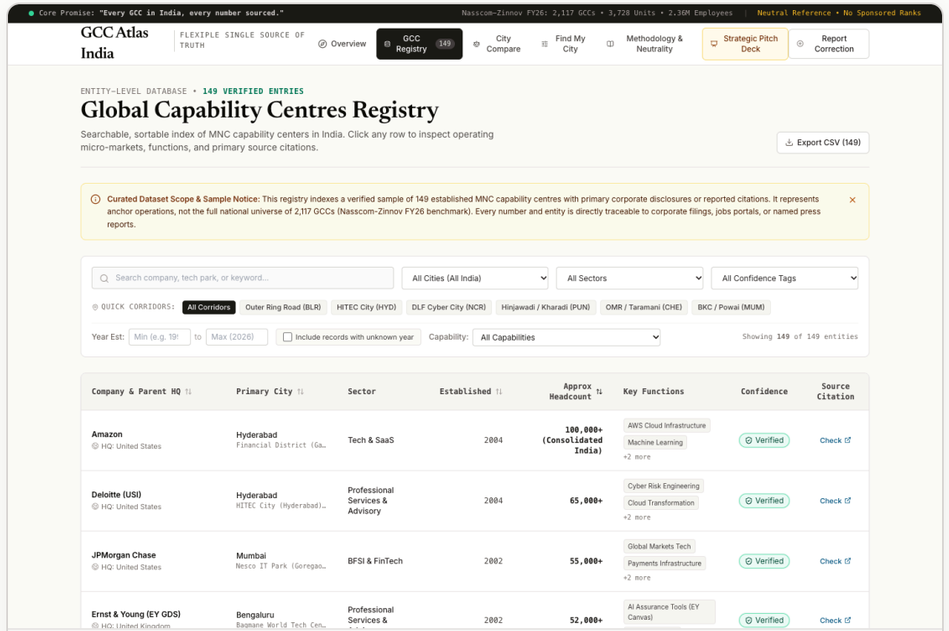

Built for global CXOs deciding where to open. Grounded in actual audited corporate records.

149 Audited GCC Records (Strict Data Honesty)

Every single row has a company name, city, function, headcount, confidence badge, and a publicly verifiable source link.

```
AUDIT.md Results: 126 Confirmed Unchanged (84.6%) • 20 Corrected to primary portals (13.4%) • 3 Nulled for honesty (2.0%) • 0 Fabricated
```

Where data is not publicly stated by the MNC (e.g., Stripe India headcount & establishment year), fields are strictly kept `null` and displayed as *"Not available yet"*.

Live Feature: Entity Registry with Micro-market Quick Corridors & CSV Export

6-City Head-to-Head Comparator Matrix

Side-by-side benchmarking across Bengaluru, Hyderabad, Pune, Chennai, Delhi NCR, and Mumbai:

- **Office Rents:** Grade A blended averages and corridor min-max ranges.
- **Talent Arbitrage:** SWE salary bands with verified discounts vs Bengaluru baseline.

SECTION 3 (PART 2)

The Solution: Deterministic Location Engine

4-question criteria with 100% visible math. No black-box AI, no paid placement.

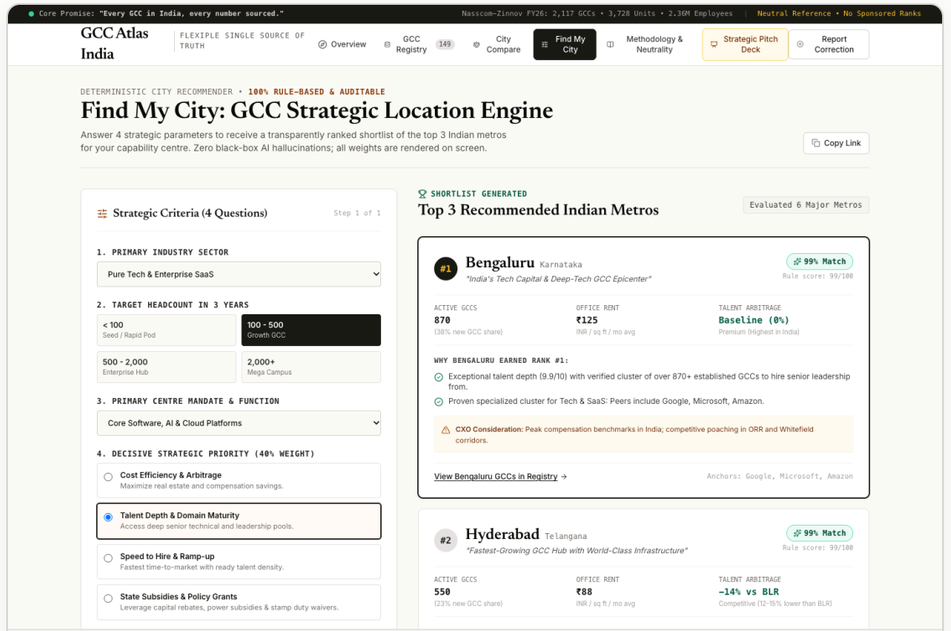

4 Strategic Input Parameters

- **1. Industry Sector:** Tech/SaaS, BFSI, Healthcare/Pharma, Auto/Manufacturing, Aerospace, Retail.
- **2. Planned Team Size in 3 Years:** <100 (Seed pod), 100-500 (Growth), 500-2,000, 2,000+.
- **3. Centre Mandate:** Core Software/AI, Finance & Risk, Hardware/R&D, Operations.
- **4. Decisive Priority (40% Weight):** Cost Arbitrage, Talent Depth, Speed to Hire, State Subsidies.

Transparent Mathematical Scoring Rule

```
Total Score = (Priority Metric × 4.0) + Sector Fit (25) + Function Fit (20) + Scale Factor (15) + Base Ecosystem (10)
```

Generates a ranked Top 3 shortlist with plain-language rank justifications, real peer GCC anchors, and honest CXO caveats (e.g., ORR traffic density, BKC rent premiums).

Live Feature: Find My City Wizard with Transparent Point Breakdown Table

SECTION 4

The Positioning: Sourced Reference & Neutrality

Positioned as India's neutral GCC reference. Why each ecosystem stakeholder switches.

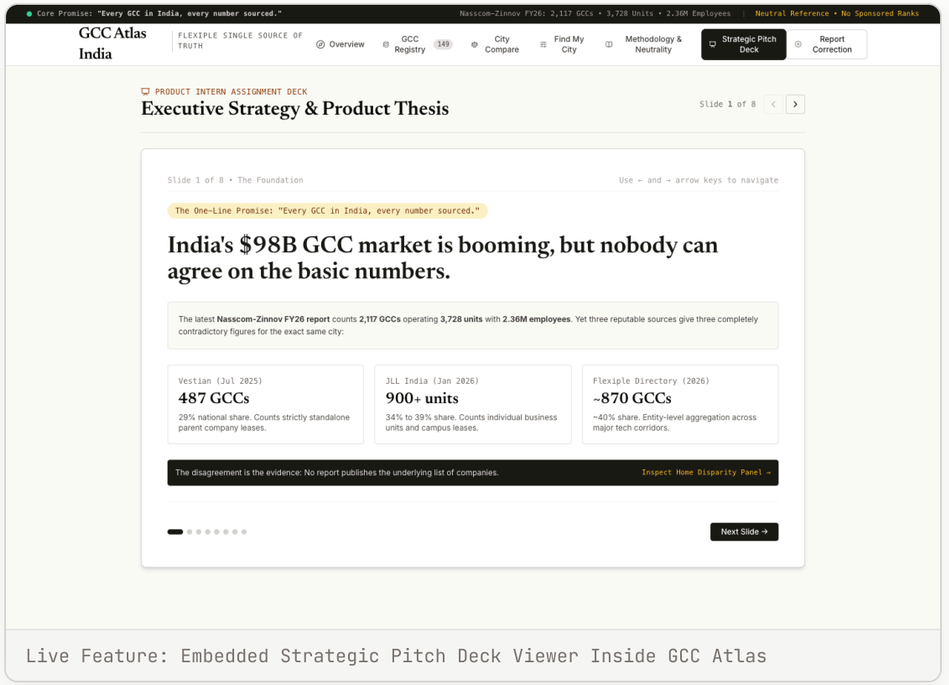

Market Positioning: A Neutral, Sourced Reference

The Neutrality Rule: Nobody can pay to change a score, alter a city ranking, or delete an honest caveat.

Entrant-Free Model: Global companies access 100% of data and tools without paywalls. Future monetization comes purely from vetted B2B service provider introduction fees.

Why Stakeholders Switch to GCC Atlas

- **Global Entrants:** Free board-ready numbers; entity-level citations they can audit; zero broker bias.
- **Vetted Setup Advisors & BOTs:** High-intent inbound leads from CXOs who have already finalized their shortlist.
- **Commercial Landlords:** Real-time corridor-level demand intelligence (ORR, HITEC, Kharadi, BKC).
- **State IT Promotion Boards:** Sourced showcase of gazetted policy incentives delivered directly to active decision-makers.
